Our restaurant, we called it "ATOZ" is specialized on providing well-known delicious foods from all over the world. Our customers are true connoisseurs of taste and our staff consists of masters of their craft. The main figures in our kitchen are our three chefs Nurillakhon, Nodirkhoja and Shakhzod.

The main banner of the website was mostly implemented using CSS rules and Boostrap 4 classes. Animation on the banner was implemented using the '@keyframes' animation code specifier rule. Navbar contains navigation links. The smooth behaviour of the navigation was implemented using jQuery '.animate()' method.
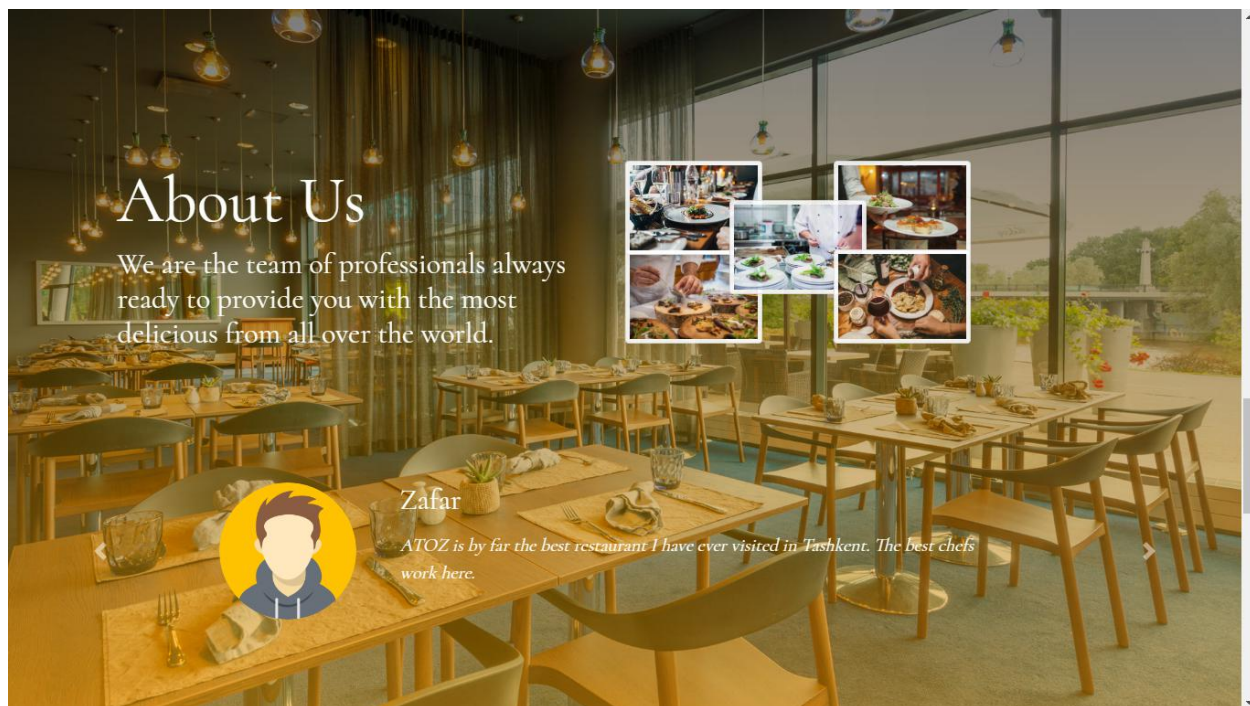

As you navigate your mouse through the photos on the "Special items" section you can notice the responsive behaviour of the images. That was mainly implemented using Bootstrap 4 'img-fluid' and 'img-thumbnail' classes.
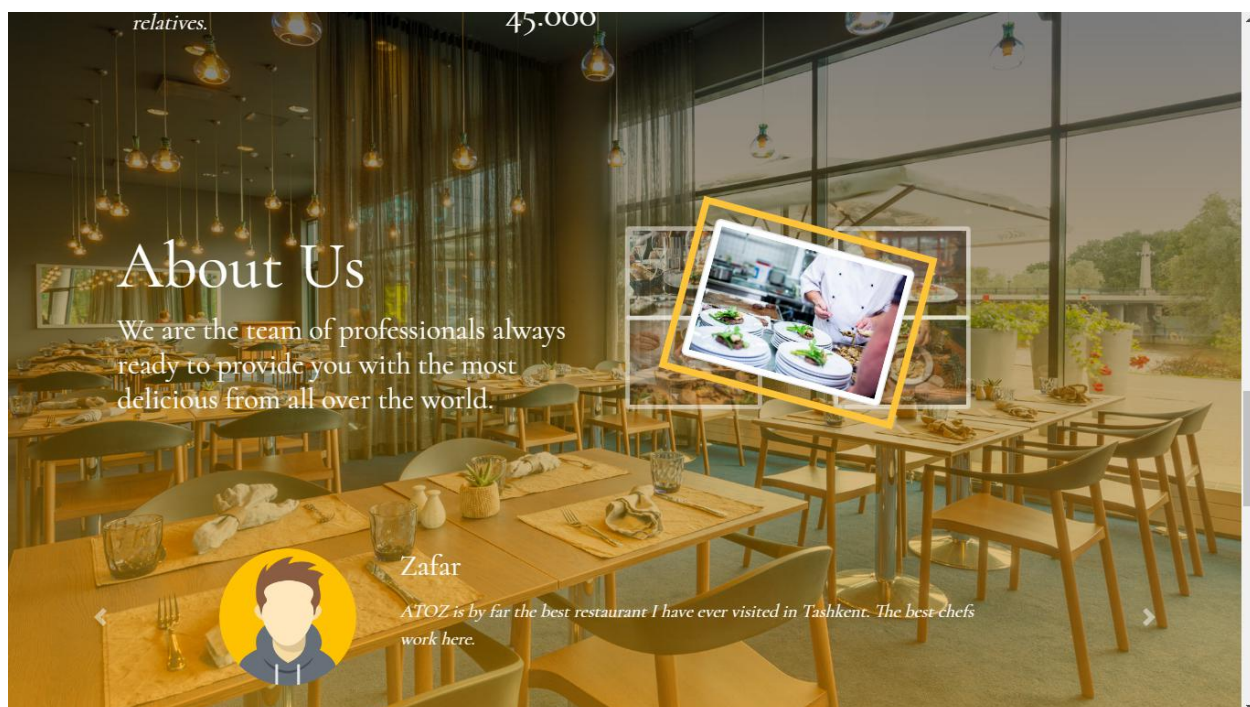

If you click on the images on the "Special items" section, the images will appear in the dialog. That was implemented using responsive lightbox and dialog script - Magnific Popup.

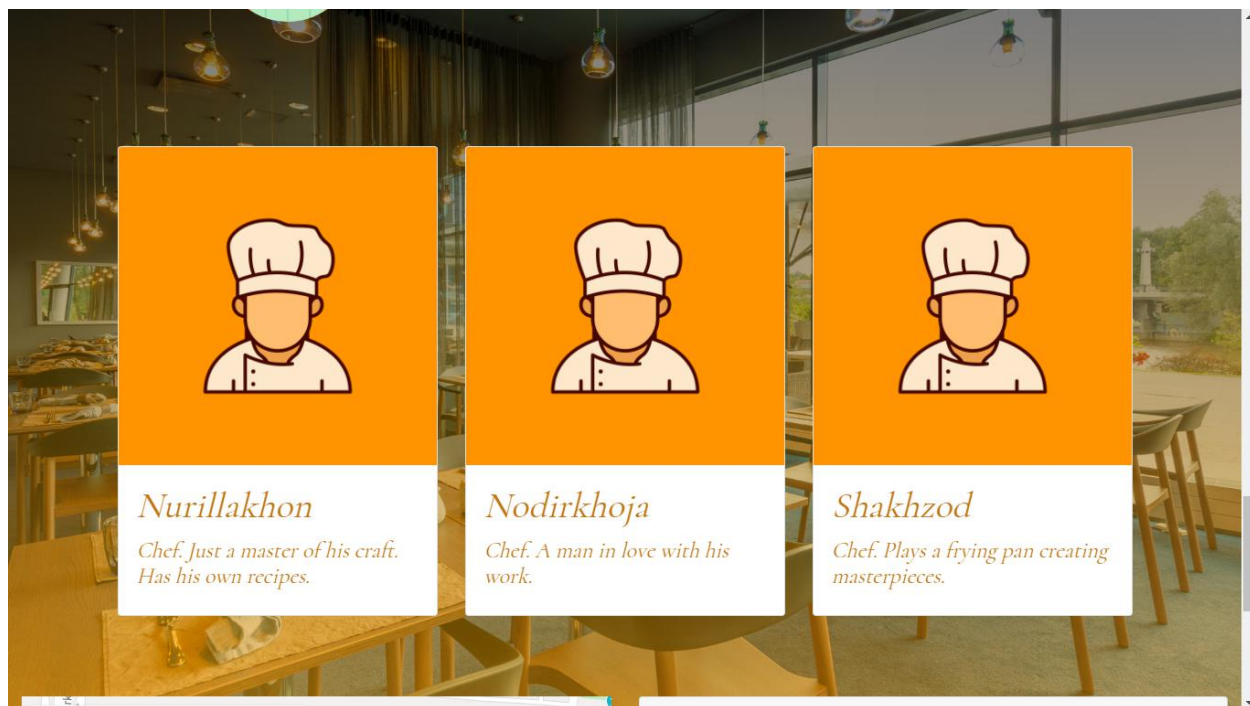

Our "Menu" section with the description of the meals.

Images and their animation on "About Us" section made using CSS rules (z-indexing) and Bootstrap 4 classes.

Cycling for "Reviews" made using Bootstrap 4 'carousel' slideshow.

"Team" information.

In the "Contacts" section we integrated Google maps. "Contact list" is made so that customer can leave their contacts for further contacts.
